Members remember dues \$25 cash
Questions call Janet Gale 435-527-4537

Social distancing or wear your mask.

Quality Water!

The quality of your water is something you might take for granted. We don't! Our system's water is continuously tested and meets or exceeds all drinking water standards established by the EPA.

Depending on Mother Nature, more or less chlorine is needed to make our water safe. You may taste a difference but you can be sure it is always safe to drink. Here's a tip for using water wisely at home.

Be a leak seeker. A slow drip can add up to 15 or 20 gallons a day. Check all your faucets once or twice a year. If any of them drip after you've turned them off firmly, try replacing the washer. Most leaks, aside from toilets, are in faucets and are most commonly caused by worn washers.

If the leak is still there after you've replaced the washer, something else may be wrong and you may want to get in touch with a plumber.
